

NOAH RAGAN

SOFTWARE ENGINEER | FULL STACK

Willow Springs, MO | noah.j.ragan@gmail.com | noahragan-portfolio.vercel.app | linkedin.com/in/njragandev | github.com/MotherTheresa64

PROFESSIONAL SUMMARY

Early-career full-stack software engineer building production-minded web systems with React, TypeScript, Python, FastAPI/Flask, PostgreSQL, Redis, REST/WebSocket APIs, background processing, testing, Docker, and CI/CD. Portfolio combines a systems-focused incident-operations capstone with four product-complete applications across planning, collaboration, travel, and personal finance.

TECHNICAL SKILLS

Languages / Frontend: Python, TypeScript, JavaScript, SQL, React, HTML5, CSS3, Tailwind CSS, Vite
Backend / Systems: FastAPI, Flask, Node.js/Express, REST APIs, WebSockets, Celery, SQLAlchemy, Redis
Data / Quality / Delivery: PostgreSQL, Firebase/Firestore, Pytest, validation, RBAC, Docker Compose, Git, GitHub Actions, CI/CD, Render, Vercel

CAPSTONE PROJECT

Aegis - Real-Time Incident Operations Platform - Active Development | React / TypeScript / FastAPI / PostgreSQL / Redis / WebSockets / Celery / Docker

- Building a multi-tenant incident-management system covering service health, alert ingestion/deduplication, incident coordination, realtime timelines, public status communication, audit history, and postmortem workflows.
- Architected a modular FastAPI monolith with an independently scalable Celery worker; PostgreSQL is authoritative while Redis handles queues, cache, rate limits, and event fanout to organization-scoped WebSocket clients.
- Designed explicit tenant/RBAC security boundaries, documented architecture and security decisions, containerized local infrastructure, and CI/CD with an observability- and infrastructure-as-code-oriented production path.

SELECTED PRODUCT WORK

Planora | Planning & Execution Workspace

- Built goal-to-execution workflows with plans, milestones, tasks, Kanban, calendar scheduling, Today views, search, analytics, responsive UX, persistence, and Firebase-ready per-user sync.

Threadline | Team Knowledge & Collaboration

- Built multi-workspace discussions and knowledge flows with channels, deep-linked threads, replies/reactions, bookmarks, resolutions, searchable documents, version history, board/timeline views, and role-aware Firestore-ready collaboration.

Wanderline | Collaborative Travel Planning

- Built collaborative trip planning with itineraries, traveler/logistics data, reservations, budgets/expenses, packing, saved places, live weather, sharing, mobile-first navigation, and Google Maps integration.

Ledgerly | Personal Finance Application

- Built financial accounts, transactions/transfers, budgets, savings goals, reports, CSV import/export, responsive mobile UX, Flask REST APIs, PostgreSQL models, automated tests, CI/CD, and user-scoped data boundaries.

Additional engineering: Advanced Service API - deployed Flask/PostgreSQL REST API with SQLAlchemy, Marshmallow, Swagger/OpenAPI, pytest, Unicorn, and CI/CD.

TRAINING & EXPERIENCE

Coding Temple - Full Stack Software Engineering Certificate | Project-based training in React, TypeScript, Python/Flask, SQL, APIs, authentication, testing, Git/GitHub, and deployment.

Enterprise Mobility - Reservation Specialist | Remote | Sep 2024-Mar 2025 - Resolved high-volume account/reservation issues, documented cases, and communicated solutions across time-sensitive remote workflows.

Tractor Supply Company - Team Member | Willow Springs, MO | May-Aug 2026 - Supported customer, inventory, merchandising, and handheld-system workflows in a fast-paced operating environment.

Vivint - Tier 3 Technical Support | Remote | Nov 2022-Aug 2023 - Troubleshoot escalated network-connected security-system issues and communicated technical resolutions in a remote support environment.

EDUCATION

Union Adventist University - Computer Science & Mathematics coursework
