NOAH RAGAN

FULL-STACK DEVELOPER · REACT · TYPESCRIPT · PYTHON/FASTAPI · POSTGRESQL

Willow Springs, MO · Open to remote (US) · 573-418-4299 · noah.j.ragan@gmail.com
noahragan-portfolio.vercel.app · github.com/MotherTheresa64 · linkedin.com/in/njragandev

SUMMARY

Bootcamp-trained full-stack developer who ships deployed, end-to-end web applications: React 19 and TypeScript front ends, FastAPI and Flask APIs, PostgreSQL data models, automated test suites, and CI/CD pipelines. Nearly two years of Tier 3 technical support before engineering, so diagnosing unfamiliar systems under pressure is the default. Current work spans Aegis, a live multi-tenant incident platform (37-endpoint API, 18 integration tests), and ten dependency-free TypeScript libraries with 190 tests and a live demo each.

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL, HTML5, CSS3
Frontend: React 19, Vite, Tailwind CSS, responsive and mobile-first UI, component architecture
Backend: FastAPI, Flask, Express, Node.js (node:http, node:sqlite), SQLAlchemy, Alembic, Celery, REST API design, WebSockets, JWT authentication, role-based access control
Data & Delivery: PostgreSQL, Redis, Firebase, Docker Compose, Nginx, GitHub Actions, Prometheus, Render, Vercel
Testing: Pytest (52 tests across Aegis and Ledgerly), Vitest, Node's built-in test runner (190 tests across 10 libraries), integration, permission, and failure-path testing

PROJECTS

Aegis — *Incident Operations Platform* **LIVE · 2026**

aegis-web-jvlk.onrender.com · github.com/MotherTheresa64/Aegis — React 19, TypeScript, FastAPI, PostgreSQL, Redis, Celery

- Designed a 37-endpoint FastAPI service across 15 routers on PostgreSQL with SQLAlchemy and Alembic migrations, enforcing tenant isolation and five-role RBAC so no request can cross an organization boundary.
- Serialized competing alert deliveries with PostgreSQL advisory locks over a composite organization, service, source, and fingerprint identity, so retries attach to one incident instead of opening duplicates.
- Delivered realtime incident state over organization-scoped WebSockets using single-use tickets, revalidating membership on connected clients and notifying only after commit.
- Committed webhook delivery intent in the same transaction as the domain change before Celery dispatch, keeping HMAC-signed, SSRF-guarded retries from corrupting state, and covered auth, tenant isolation, realtime, and broker-failure paths with 18 Pytest tests in GitHub Actions.

Systems libraries — *ten packages, TypeScript, zero dependencies* **2026**

all ten live: mothertheresa64.github.io/ten-demos · github.com/MotherTheresa64

- Wrote ten libraries from scratch — flags (Quorum), webhooks (Relay), auth (Aperture), event-sourced documents (Atlas), double-entry ledger on SQLite (Ledger), job queue (Ratchet), search (Sift), rate limiting (Cordon), metrics (Beacon), expressions (Crucible) — each with a live browser demo, strict types and 190 tests on Node's built-in runner.
- Hashed flag and subject into a fixed 100,000-point space so raising a rollout can only add subjects, proved monotonicity over 2,000 subjects, and signed webhook attempts with HMAC over timestamp and body after refusing loopback and cloud-metadata addresses.
- Rejected stale document writes with typed conflicts instead of lost updates, kept debits equal to credits on integer minor units with closed periods, and consumed a job attempt at claim so a poisoned job is buried.

Ledgerly — *Personal finance* **2026**

- Flask 3 and PostgreSQL finance API with strict per-user ownership checks, Firebase-verified ID tokens and CSV import, covered by 34 Pytest tests spanning transfers, budgets, migrations and auth security. github.com/MotherTheresa64/Ledgerly

Threadline — *Collaborative knowledge workspace* **2026**

- Team workspace where discussions resolve into decisions and versioned documents — React 19, TypeScript, Express 5. threadline-ga8w.onrender.com

Wanderline — *Collaborative travel* **2026**

- Shared trip planner with idea voting, itineraries, travelers, shared expenses and live weather, with owner, editor and viewer roles, on React 19 and Express 5. wanderline-s1yv.onrender.com

Planora — *Planning workspace* **2026**

- Goal, plan, milestone and task hierarchy with a five-stage workflow, drag-and-drop Kanban and a Today view grouping overdue and upcoming work, on React 19 and Express 5. planora-zlxv.onrender.com

EXPERIENCE

Tractor Supply Company — *Team Member* **Willow Springs, MO · May 2026 – Aug 2026**

- Handled customer questions, inventory, and point-of-sale transactions, keeping records accurate during high-volume shifts.

Coding Temple — *Full Stack Software Engineering Apprentice (Bootcamp)* **Remote · Aug 2024 – Jul 2025**

- Completed a remote, deadline-driven full-stack program, building and deploying applications with React, TypeScript, Python, Flask, SQL and Git, including auth, data modeling and deployment.

Enterprise Mobility — *Reservation Specialist* **Remote · Sep 2024 – Mar 2025**

- Resolved high-volume reservation and account issues across multiple internal systems, documenting each case and communicating the resolution clearly in time-sensitive remote workflows.

Vivint — *Tier 3 Technical Support / Upgrades Specialist* **Remote · Nov 2022 – Aug 2023**

- Diagnosed escalated network and hardware failures on connected home-security systems that Tier 1 and Tier 2 could not resolve, coordinating with field technicians to restore service.

EDUCATION

Coding Temple — *Certificate, Full Stack Software Engineering* · Aug 2024 – Jul 2025
Union Adventist University — *Coursework, Computer Science and Mathematics* · Aug 2020 – Jun 2022
